

## Strip-to-Strip Bending Extension

EL-BV90BEXT

Weight: 1 oz.  
 Length: 1.4 in. (each arm)  
 Width (inside): 0.3 in. (standard strip)

0.4 in. (brighter strip)  
 Available Color: White  
 Range of Motion: 10° - 180°  
 Available Connector Types: Flexible LED Strip Light / by the foot,  
 Brighter Flexible LED Strip  
 Voltage: 12V DC

### Product Description

This Strip-to-Strip Bending Extension allows two sections of Flexible LED Strip Lights to be connected and make anywhere from a 10° to 180° turn inside picture frames, display cases, in shelving, or any other situation where both continuous lighting and flexibility are needed. Each arm of the connector is only 1.4" long, enabling strip lighting to reach into small, dark corners. This connector comes in two sizes: the Standard Flexible Strip version fits our standard 0.3 inch wide single color non-waterproof strips; the Brighter Strip version fits our non-waterproof 0.4 inch wide Brighter Flexible LED Strip Lighting.

Use of the connector couldn't be easier: just plug it into the strips as you would connect strips to a power source. Each end of the bending extension connector has a small brown clip inside the white housing. Pull both sides of the clip out, insert the end of the strip that matches the +/- polarity of the bending extension (you may have to try both ends), and push the strip and the brown clip back into the housing. It's that simple!

This connector is both flexible and holds its shape, so you just bend to the desired angle, and the connector will remain at that angle. It can be adjusted to fit any corner with an angle between 180° and 10°. This strip-to-strip bending extension connector isn't just for picture frames either. Try using this connector to turn a corner in your under cabinet LED lighting installation, too!
