Connector types: (1) 1/4" DC coaxial,
(1) female or male LED light bar

Light bar plug diameter: 0.25 in.

Coaxial plug diameter: 0.4 in.

Voltage: 12V DC

Our LED Light Bar Adapter Cable is an essential accessory for those who wish to "plug and play" our LED light bars, that is, to be able to simply plug a light bar into a DC adapter without splicing and soldering. Elemental's light bars all come with two hardwired plugs, one male and one female, making it easy, with the use of this connector, to power them. The DC plug on this cable also fits into our DC extension cables, inline on/off and dimmer switches, and DC splitter plugs, making it an essential LED accessory for almost any LED lighting installation.

Although this plug is called a light bar cable, it fits both our waterproof and non-waterproof light bars, as well as our waterproof LED strip lights. All three of these product types use our waterproof plug. This adapter cable will convert the standard 1/4" coaxial plug from our DC adapters to fit the male two-prong connectors on all sizes of our Waterproof LED Light Bars, the Brighter LED Bars, and our Brighter LED Light Bars, as well as any single-color waterproof LED light strip.
