

Wire T-Tap Connector

EL-TTAP

Weight: 0.1 oz.
Length: 0.8 in.
Width: 0.5 in.
Height: 0.5 in.

Our Wire T-Tap Connector is the perfect accessory for quick and easy connection of two pairs of wires. This ingenious little device allows you to connect the two pairs of wires without splicing, stripping, or severing them. This is an important accessory for anyone who wants to make a custom LED lighting setup and needs flexibility in how and where their LED light fixtures are connected.

Using the T-Tap is a snap! While the connector is open, just slide each pair of wires into opposite ends of the connector, making sure they overlap inside the connector. Then snap the connector shut with your thumb, which causes the metal fitting to strip all the wires and create a connection. The clip can also be easily removed by pulling out and up on the tab, thereby releasing the wires.

In addition to being easy to use, our T-Tap, at less than an inch long and half an inch wide, is also very compact and can fit discreetly into signs, cabinets, shelves, lighting fixtures, displays, cabinets, and basically almost anywhere.
